DORMER PRAMET

NEW DORMER REAMERS

Machine Reamer, Taper Pin Type, Straight Shank - series B630

Left hand high spiral. Right hand cut taper pin (1/4" per foot). Designed to convert a straight hole into a tapered hole into which standard taper pins (ASA B5.20-1958) will fit. Ideal geometry for the machine reaming of pin holes on a production basis.

Hand Reamer, Taper Pin, Square Drive - series B670

Left hand slow spiral flute, right hand cut taper pin (1/4" per foot) hand reamer with square drive. Designed to convert a straight hole into a tapered hole into which standard taper pins (ASA B5.20-1958) will fit.

Hand Reamer, Taper Pin Type, Square Drive - series B660

Designed to convert a straight hole into a tapered hole into which standard taper pins (ASA B5.20-1958) will fit. The square on the shank is suitable for holding a tap wrench or vise, depending on whether the reamer or part is rotating, making them ideal for hand use.

Hand Reamer, Taper Pipe Type, Square Drive - series B680

Left hand spiral flute, right hand cut taper (3/4" per foot) taper pipe reamer. Intended for reaming holes to be tapped with American Standard taper pipe taps. Generally used by hand with a tap wrench.

Hand Reamer, Square Drive - series B650

Widely used by hand for the final sizing of drilled holes. A long starting taper allows for ease of entry and accurate alignment. The straight flute style is recommended for most general purpose hand reaming applications.

Chucking Reamer, Straight Shank - series B610

Chucking reamers have shorter and deeper flutes than hand reamers and are specifically designed for accurate machine reaming in most materials and equipment including screw machines, turret lathes, drill presses, and machining centers. Recommended for most general purpose reaming.

Chucking Reamer, Straight Shank - series B620

Cuts with a smoother, chatter free action than straight flute reamers. Recommended for more difficult to ream materials, better surface finish requirements, applications with an interruption, and to aid in chip evacuation in blind holes.

Bridge Reamer, Taper Shank - series B640

Left hand slow spiral, right hand cut tapered bridge reamer. Used in structural iron and steel applications for badly misaligned holes.

OFFER VALID FROM MAY 1st - JUNE 15th 2022
